FleetLogix

FL-300 + FL-350

FEATURES

Realtime GPS tracking on google maps

Realtime Tracking

Up to 8 video channels with full HD resolution

Live Stream Footage

Realtime speeding and driver behaviour alerts

On-Going Alerts

Event footage is automatically uploaded to the cloud platform

Cloud Storage

Vehicle usage and driving history stored for up to 10 years.

Fleet Access

Full suite of reports of historic events

Manage Records

1000+ Hour and up to 4TB SSD black box storage

HD Storage

Instant notification when camera is covered or tampered with

Tamper Resistance

SUMMARY

Both FL-300 and FL-350 are AI dashcams that help drivers to reduce traffic accidents and facilitates fleets to improve management efficiency.

Based on AI technology, the devices can actively detect risky driving events, supporting sending local real-time reminders to the driver to avoid risks and uploading events to the fleet management platform for driver training.

Both devices transmit real-time and accurate vehicle position information and operation data to the fleet management platform, as well as provide high-quality video live view playback to make the fleet management easier and more efficient.

The FL-350 includes an additional driver-facing lens to detect driver fatigue monitoring and distraction.
